The diagram illustrates a power distribution system. A main busbar is shown at the top, with a PE (Protective Earth) point marked. A branch circuit is connected to the main busbar, featuring a switch and a 100A load. The branch circuit is labeled with a voltage of 100V and a current of 100A. The main busbar is also labeled with a voltage of 100V and a current of 100A. The diagram shows the connection of the main busbar to the branch circuit and the load, with a PE point marked on the main busbar.
